Course synopsis (max. 10 lines)

The course covers all aspects of modern refractive surgery. In addition to an introduction to essential basic concepts such as topography and corneal biomechanics, preoperative examination methods and a survey of the devices and instruments used in refractive surgery, all approved surgical procedures are presented in detail (including videos). The intra-and postoperative complications of the various procedures are reviewed, the visual and refractive results are presented via a survey of peer-reviewed literature, new and evolving methods such as presbyopia correction and custom ablations are introduced, and the evaluation of the post-operative quality of vision is presented.

Aim(s) of the course (max. 10 lines) _____

The course functions as both a basic (first half) and an advanced (second half) introduction to modern corneal and IOL-based refractive surgery for the trained ophthalmologist planning to enter this subspecialty. However, because the curriculum is updated annually, the course also provides the practicing refractive surgeon access to the most up-to-date information in the field.

Achievements (what will the participant achieve in knowledge) _____

Please see synopsis and aims above, as well as the detailed course outline below
