Course synopsis (max. 10 lines)

CTR's have been available since 1993 in Europe and have recently gained FDA approval. They are now in widespread use and have contributed significantly to improved safety and outcomes in eyes with compromised zonules. They are easily understood in principle but there are plenty of pitfalls in practice and some unique complications that are associated with their use. This is especially true for the inexperienced surgeon and occasional user. This course covers the different types of CTR's (plain, sutured, segments) and their pre-planned ("cold") and unplanned ("hot") use. It offers highly practical tips and tricks for their reliable and safe insertion and also demonstrates how things can go wrong, how to avoid these problems and what to do when they happen. It is supported by extensive examples illustrated with high quality video.

Aim(s) of the course (max. 10 lines)

To understand the indications, limitations and surgical techniques for the successful use all types of CTRs and to be able to minimise complications associated with their use.

Achievements (what will the participant achieve in knowledge) _____

To understand the indications, limitations and surgical techniques for the successful use all types of CTRs and to be able to minimise complications associated with their use.

Course outline (please specify or add a flyer) _____

	<u>Topic title</u>	<u>Time (min)</u>
1.	Indications, techniques and complications of CTRs: Brian Little	30
2.	Sutured rings and segments: Som Prasad	20
